General Ceramic Tile Care

Although ceramic tile requires less floor care than most of the other flooring types, there are things you need to do to maintain the beauty of the ceramic tile floor.

Vacuum Regularly - Sweep, or vacuum your glazed tile regularly.

Wash Regularly - Wash the floor regularly to remove any dirt or grit. Use a mild, diluted detergent solution, such as Mr. Clean or Spic & Span. If in doubt, call us to get the tile manufacturer's cleaning recommendations.

Avoid Ammonia-based Cleaners - ammonia-based cleaners may discolor some types of colored grout.

Always Rinse - After washing with a mild detergent you should thoroughly rinse the floor with clean, warm water.

Never Wax a Tile - The ceramic finish should never be waxed.

Wipe Spills Immediately - If some liquids get spilled on the floor you may use an all-purpose cleaner such as Mohawk Hard Surface Cleaner or Mohawk Tile & Grout Cleaner to clean up the effected area. This will help the grout joints from becoming discolored from spills. Sealing grout will protect grout from staining and will make cleaning easier.
